Enterprise intelligence crisis

Data Explosion

120 Trillion Gigabytes of data was produced in 2023, of which 80% is unstructured ^[1]

Tool Proliferation

364 SaaS Tools used in the average enterprise creating operational silos ^[2]

AI Evolution

Implementation Gap
AI has advanced rapidly but enterprise coordination remains fragmented and manual

Daily realities of knowledge workers

Productivity Crisis

62% of the workday spent on repetitive & mundane tasks ^[5]

Information Drain

3.6 hours per day searching for information ^[4]

Attention Fragmentation

Attention Fragmentation
jumping from one task to another ^[6]

Lorem Ipsum Dolor Sit Amet

IT impact

Spending Spiral

30-40% shadow IT of total IT spend ^[10]

Integration Nightmare

50%+ of Dev Lifecycle costs API maintenance costs ^[11]

Control Crisis

\$3 million average loss Companies without centralized data governance ^[12]

Business impact

Executive Time Drain

~40% of executives' time spent on decision making ^[7]

Decision Making Crisis

\$250M in average wages annually wasted on ineffective decision making by Fortune 500 companies ^[8]

Revenue Leak

20-30% revenue loss annually due to incorrect or siloed data ^[9]

Project GAIA is a TDRA-led AI initiative, that aims to address similar productivity challenges faced by FGEs

Lorem Ipsum Dolor Sit Amet

What is GAIA?

A TDRA-led AI-enabled platform that helps government employees accomplish everyday work faster and more consistently

What does GAIA do?

Enables end-users to build and use secure AI assistants/agents: Search, summarize, draft, analyze, and take actions through approved integrations

Who is GAIA for?

GAIA is for all employees across Federal Government Entities (FGEs) — not just for technical teams

How we will deliver:

Phased rollout: We will start with 3 pilot FGEs (understand their requirements first, finalize use-cases and roll-out based on a passed-approach) -> Initially to be tested outside FEDnet¹ -> Later, harden the platform on FedNet -> Next scale to additional FGEs -> Lastly, transition to steady-state operations

Lorem Ipsum Dolor Sit Amet

Vision

Deploy GAIA as a secure, unified Government AI Assistant platform under TDRA that empowers UAE federal entities to quickly build and manage AI agents, automate employee tasks, deliver enhanced public services and strengthening UAE's global leadership in AI.

Strategic Initiatives (12 months)

Operate, govern & continuously improve GAIA

Define & Deploy GAIA

- Set GAIA vision & strategy aligned with UAE AI Strategy / "We the UAE 2031"
- Capture use case requirements and design architecture, integrations and governance
- GAIA will leverage the ASK agentic platform, from AI71
- Configure, test and deploy GAIA, including agent builder, guardrails, RAG and analytics

Co-design use cases and scale GAIA with federal entities

- Run discovery & use case co-design workshops with **selected government entities**.
- Priorities and shape **high-value pilot use cases**.
- Develop onboarding toolkit and **roll out GAIA to additional entities** with training and change support

- Operate GAIA on the ASK-platform, deployed on FEDnet as a sovereign cloud deployment
- Operate the GAIA-platform under agreed SLAs with 24/7 support for critical services, once deployed at scale
- Monitor performance and usage; feed insights into a continuous product improvement backlog and new features
- Run daily / weekly / monthly / quarterly governance and deliver runbooks, training and formal handover

Measures of Success

Foundation:

GAIA core live in production, successfully tested and approved by TDRA

Adoption & usage:

Co-design workshop delivered with **FGEs**; **pilot use cases** approved; GAIA is adopted and in active use across FGEs

Governance & compliance:

Governance forums running to cadence; risk register, compliance checklist and cyber and AI security/ audit requirements completed

Sustainable handover:

Operational runbooks, training and knowledge transfer completed; post-implementation review shows contracted benefits achieved

Definition

- GAIA is a new **AI platform** for the UAE Federal Government, led by TDRA and co-developed with AI71
- It brings secure AI assistance and analytics in **Arabic and English** to Federal Government Entities (FGEs)
- It enables task-focused **AI “agents”** that help employees, automate workflows, turn lengthy reports and scattered information into focused briefs, key insights and well-structured outputs — in line with UAE cybersecurity, data protection and AI governance expectations

Purpose (what success looks like)

- **Enable all employees** — not just technical teams — to use AI agents directly in their work
- **Establish an “intelligence layer” for each entity** — turning repeatable prompts into reusable agents that make work faster, more consistent, and easier to scale
- **Reduce reliance on specialist support** and speed up day-to-day workflows
- **Support Arabic and English prompts** and outputs (one prompt → one agent → improved workflow).
- **Ground responses on approved internal knowledge** bases and connect to existing tools (email, calendars, repositories, core applications)
- **Improve customer facing public services** by using AI agents/workflow automation to deliver faster, clearer, and enhanced experience to citizens

Guiding Principles

- **Operate in a secure government environment** aligned with cybersecurity, data protection and AI governance expectations
- **Secure by design**, operated under human oversight
- **Designed for access to all**, including those less privileged
- Fully aligned with **UAE AI Strategy** and ‘We the UAE 2031’

Who GAIA is for: All employees across Federal Government Entities (FGEs) — not just for technical teams

Lorem Ipsum Dolor Sit Amet

Who it is for and what changes in day-to-day work

Audience

Built for government employees

- Non-technical staff can use AI agents directly in their work
- Shared agents help standardize outputs across teams and departments
- Supports Arabic and English interaction
- Government employees can leverage agents to deliver public services more efficiently to citizens

Operational impact

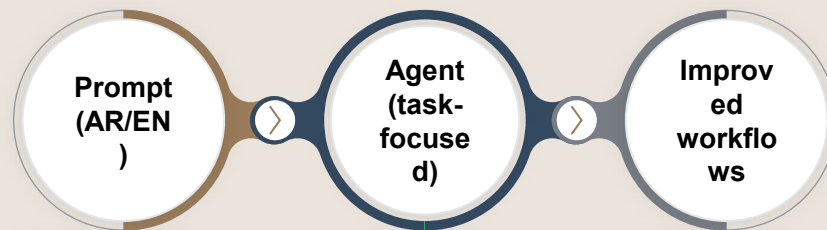

From “repetitive work” to higher-value decisions

- Faster drafting, briefing, and summarization
- More consistent answers from approved knowledge sources
- Reduced cycle time for analysis and reporting
- Repetitive workflows automated to improve productivity

How work changes

Agents run on approved internal knowledge and connect to existing tools (e.g., email, calendars, document repositories, core applications) so GAIA fits into everyday workflows

Result: Faster, more consistent outputs at scale, resulting in **~20-25%¹ reduction in execution time** for employees across drafting, briefing, summarizing, analysis, reporting etc.

Objectives

- **Establish GAIA**, a TDRA-led Government AI Assistant, to enable Federal Government Entities (FGEs) to **rapidly deploy secure, governed AI assistants and agents**
- **Accelerate time-to-value** through a product-first approach, leveraging AI71's ASK platform
- **Prioritise high-frequency internal use cases** that deliver measurable productivity and decision support
- **Prove value through 3 high-impact pilot FGEs**, then create a scalable foundation for broader federal adoption
- **Ensure full compliance** with UAE cybersecurity, data protection, cloud, and AI governance requirements
- **Build a sustainable operating model** covering governance, adoption, analytics, and continuous improvement

Scope Map

Key Initiatives

Initiative	In-Scope	Out of scope
 Platform & architecture	• Product-first delivery leveraging ASK by AI71 as the core foundation • Targeted FGE extensions (governance, guardrails, branding) • Phased deployment aligned to FGE / FedNet readiness	• Ground-up bespoke platform build • "Big bang" rollout across all FGEs simultaneously
 Use cases & agents	• Pilot-led deployment of high-value internal use cases • Task-focused assistants/agents designed for reuse across FGEs • Controlled backlog shaped by impact and scalability	• Unprioritised use case delivery • One-off bespoke agents with limited reuse value • Citizen-service redesign in early phases
 Data, knowledge & integrations	• Approved knowledge ingestion and RAG-based document intelligence • Prioritised integrations (e.g., documents, email, calendars etc.)	• Unrestricted data ingestion • Default end-to-end automation of complex transactional systems (ERP/HR/finance)
 Governance, security & compliance	• Centralised TDRA governance and auditability • Security controls, compliance-by-design	• Non-compliant deployments or unmanaged risk acceptance
 Adoption & Scale-up	• Structured onboarding, training and enablement (champions/trailblazers) • Value-led scale-up based on readiness and repeatability	• Immediate onboarding of all FGEs
